Usage Guidelines

Placement: Place containers in areas that achieve desired supplement intake.

Relocation: Once acceptable intake levels have been achieved, the containers may be moved to underutilized pasture areas to improve grazing distribution and forage utilization.

Accessibility: A minimum of two (2) containers in each lot or pasture may be necessary to ensure proper accessibility.

Quantity: Feed at the rate of one container for every 20 to 30 head. Beef cattle typically consume between 225 and 454 grams per head daily.

Monitoring: Free-choice consumption will depend on size of the animals fed, seasonal weather conditions, as well as quality, source and availability of other feeds.
