Usage Guidelines

Placement: Place containers in areas that achieve desired supplement intake

Relocation: Once acceptable intake levels have been achieved, the containers may be moved to underutilized pasture areas to improve grazing distribution and forage utilization

Accessibility: A minimum of two (2) containers may be necessary in each lot or pasture to assure proper accessibility

Quantity: Feed at the rate of one container for every 3-20 head. Equines will typically consume between 110 and 1,360 grams per head per day

Monitoring: Self fed consumption will depend on the size of the animals fed, seasonal weather conditions, as well as quality, source and availability of other feeds.
